

A FIELD GUIDE FOR HOME SERVICE OPERATORS

5 Hidden Revenue Leaks in Home Service Businesses

And how to plug them before they cost you another job, another invoice, or another customer. Built for HVAC, plumbing, electrical, roofing, landscaping, and pest control teams.

LEAK 01

The Cold Estimate

WHAT IT LOOKS LIKE

A lead asks for a quote, you send it, and then... nothing. No reminder gets set, no one follows up at day 3 or day 7, and the homeowner books a competitor who happened to call back first.

WHY IT COSTS YOU

Estimate follow-up is the single easiest revenue leak to plug, and the most common one to ignore. Every estimate sitting untouched for more than a few days is money quietly walking out the door.

The Fix

- ☐ Flag any estimate with no follow-up activity after 48 hours.
- ☐ Assign a named owner to every open estimate — never leave one unowned.
- ☐ Review your open estimate list daily, not at month-end.

LEAK 02

The Schedule Slip

WHAT IT LOOKS LIKE

A job falls behind because it's waiting on a customer callback, a material delivery, or a crew that never showed — and nobody notices until the customer calls asking where their crew is.

WHY IT COSTS YOU

Every day a job sits blocked is a day of payroll and overhead with no revenue to show for it, plus a customer getting more frustrated and more likely to leave a bad review.

The Fix

- ☐ Track every job's status against its committed schedule, not just its calendar date.
- ☐ Flag blocked jobs (waiting on materials, customer, or crew) the moment they stall, not after they're late.
- ☐ Give one person ownership of unblocking each stalled job.

LEAK 03

The Capacity Blind Spot

WHAT IT LOOKS LIKE

Sales books more work than the crews can absorb. Jobs sit unassigned, or the crews that are assigned get stacked so tight that quality — and morale — start to slip.

WHY IT COSTS YOU

Overloaded crews cut corners, miss appointment windows, and burn out. Unassigned jobs slip past their promised dates before anyone in the office even knows there's a problem.

The Fix

- ☐ Track crew capacity in real time, not from memory or a whiteboard.
- ☐ Flag any job sitting without a crew assignment past a set threshold.
- ☐ Flag overloaded crews before they're double- or triple-booked.

LEAK 04

The Finished-But-Unbilled Job

WHAT IT LOOKS LIKE

The crew wraps the job, marks it complete, and moves on — but the invoice doesn't go out for days or weeks because no one's job is to generate it.

WHY IT COSTS YOU

Completed work that hasn't been billed is interest-free credit you're extending to your own business. It's also the easiest revenue leak to fix, because the work is already done.

The Fix

- ☐ Auto-flag every job marked complete that hasn't been invoiced within 24–48 hours.
- ☐ Make invoicing a required step in closing out a job, not an afterthought.
- ☐ Review completed-but-unbilled jobs at the end of every day.

LEAK 05

The Quiet Collections Gap

WHAT IT LOOKS LIKE

Invoices go out, then sit unpaid because no one owns following up. Meanwhile, a customer complaint goes unresolved for a week and quietly turns into a cancellation and a one-star review.

WHY IT COSTS YOU

Cash you've already earned is the most expensive cash to chase later. And an unresolved escalation doesn't just cost the invoice — it costs the next five referrals that customer would have sent you.

The Fix

- ☐ Assign a clear owner to every overdue invoice the moment it crosses term.
- ☐ Escalate customer issues automatically based on severity, not whoever happens to notice first.
- ☐ Track revenue at risk from overdue invoices and escalations as one number leadership reviews weekly.

SEE IT BEFORE IT BECOMES A PROBLEM

Stop finding revenue leaks after the money's gone.

AnovasOS watches your estimates, jobs, crews, invoices, and customer issues in real time — and flags exactly where revenue is at risk, who owns it, and what to do next. See what's happening, fix what's stuck, and protect revenue before small issues become bigger problems.
